

SPLITFIRE

The patented SpitFire “V” design on the side electrode makes them unique. It helps to improve combustion efficiency. Because the flame kernel is not blocked by the side electrode as in other spark plugs, it can travel upward through the “V” notch into the combustion chamber.

The fact that SplitFire spark plugs make every single combustion process more effective result in several advantages: Easier engine start-up, better throttle acceptance, more power and better performance.

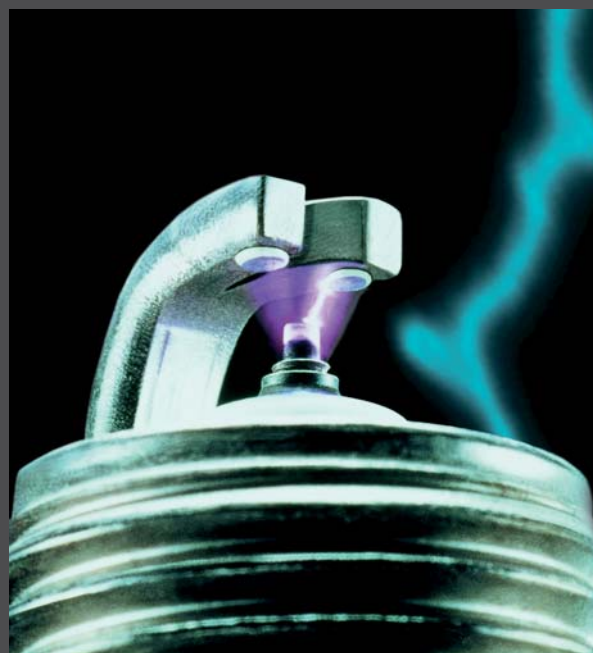

The special design of the side electrode also avoids deposits. Therefore SplitFire spark plugs prove their qualities especially during warm-up runs or when the vehicle is frequently used for short distances.

SplitFire – Performance is everything!

SplitFire – Standard V-electrode
SplitFire – Triple Platinum
